

# Multipage Tables

Here’s some fake data.

If I make a table from it, it flows across multiple pages and the formatting gets messed up.

Let's make a function to show just a portion of the data in a table at a time.

I can use this function to make a table with 11 rows.

But what I really want to do is have the code chunk generate two (or more) tables. I tried doing it with the code below, but no dice. It doesn't show anything when rendered.
